

Lamers System Care supplies sustainable and environmentally friendly systems to 15 vessels of Boluda Towage Europe

In 2019, Lamers System Care installed the Ultrasonic Anti-Fouling system on board of 4 vessels of Boluda Towage Europe. After these successful installations, LSC has received the order from Boluda Towage Europe to equip 11 other ships with the sustainable Ultrasonic Anti-Fouling system from Sonihull.

Boluda Towage Europe provides tailor-made towing services to customers in major ports in Belgium, Germany, the Netherlands and the United Kingdom. The company is part of Boluda Towage Group, which has established itself as one of the leading maritime services providers worldwide. One of the core values of Boluda Towage Europe is to cause as little damage to the environment as possible. An example of the commitment to this are the 5 hybrid tugs, which sail very efficiently and environmentally friendly. In addition, in 2019 they opted for the sustainable Ultrasonic Anti-Fouling system.

In August 2019, Lamers System Care performed the first installation on a tugboat. Hereafter, three more tugboats followed, including the UNION CORAL and UNION PEARL. On the vessels of Boluda Towage Europe, we keep the cooling water inlet pipes, strainers, box coolers, sea chests and firefighting systems (FiFi) free from fouling with the Ultrasonic Anti-Fouling system.

If the cooling water inlet pipes and box coolers are kept free from fouling, this will prevent all kinds of malfunctions in equipment and main engines. It is important for the strainers that they

retain their functionality as a filter. Keeping the fire extinguishing system free from fouling is crucial for fire safety on board the ship.

After these 4 successful installations, Boluda Towage Europe has chosen to equip 11 more tugboats with the Ultrasonic Anti-Fouling system in 2020. The installations on board these 11 vessels are equivalent to the previous installations.

"We are proud of this nice and professional partnership with Boluda Towage Europe," said Bob Lamers, Managing Director of Lamers System Care. "The company values great importance to sustainability and has a highly innovative character. The Boluda Towage Europe team thinks in terms of innovation and improvement, so that a strong direction can be deployed towards the future. The aim is to maximize the performance of the extensive fleet."

The Sonihull8 system is a preventive, environmental friendly and sustainable system with low energy consumption. For this reason, this system is an excellent fit for one of the key drivers of Boluda Towage Europe: the continuous improvement of standards for safe working with the goal of not harming people or the environment.
